

RUT - Mobile Industrial Shelving Systems

Industrial Type – ZIPPEL mobile shelving Specified for use in Storerooms and Archives

Why waste money on off site storage?

Having company records stored in a warehouse is sometimes convenient, but there are long term contracts to be signed and escalation to be considered, and most companies find that these costs can easily become a major expense of retrieving documents when queries arise.

Let's look at the alternative!

ZIPPEL RUT Mobile Shelving can offer you a “**budget level entry**” into high density storage and can provide you with a maximise the available space in your archive room, creating up to 40% more space when you had thought your storeroom was full capacity. A capital asset that can be financially justified, depreciated and has practical benefits for your staff in terms of quick and simple document retrieval on your own doorstep! And don't forget it's a compulsory requirement under Law to maintain company records for a period of 5 years for inspection and reference.

Let's mobilise our existing steel shelving!

Many companies already have storerooms with rows and rows of **existing steel shelving** but no space – **Wrong!!!** ZIPPEL has saved money for many companies and “**mobilised**” their existing fixed shelving... By fixing existing shelf racks onto moving carriages running on rails we have achieved the impossible 40% space saving or increase storage capacity by 80%, so if you have a fixed shelving we have the solution.

Layout Fixed Racking Systems

Fixed Racking Systems

- Layout

- For Insurance Companies, Auditors, Legal Companies
 - Policy Folders, Client Files
- For Hospitals, Clinics, General Practitioners – Patient Files, X-rays
- For Banks, Building Societies, Libraries
 - Correspondence Files, Information Files, Books, Literature.

LAYOUT -The most versatile fixed open racking system, a concept specifically designed with universal applications in mind. A modular system offering a range of internal fittings to suit most document storage and filing applications at an economical price.

LAYOUT - Ideal for self contained filing rooms. Racks are either wall or floor mounted and particularly suitable for lever arch filing using the T-GLIDE RAIL system or twin rail racks for suspension filing.

WHY LAYOUT? – This type of racking system is unique to document storage applications because unlike other flimsy types of racking available, it has definite advantages in that it is suitable for various types of lateral suspension filing and like all Zippel products it can be mobilised to form an integral high density bulk filing system as additional space is required with the filing area, this is a distinct advantage which other fixed racking systems do not offer.

WHY ZIPPEL? – ZIPPEL is a company dedicated to providing solutions and effecting improvements in all matters relating to Bulk Filing and this has been our only discipline for over 40 years. Understanding Quality Service and “under the skin” German Engineering has kept us in the forefront in high density filing techniques.

Enclosed RUT Steel Shelving

Steel shelving bay with enclosed sides and back.

- Quick adjustable shelves
- Multiple rows can be joined back to back
- **Dimensions:** 2210mm high x 915mm wide
